**[Register at  
www.agosci.org.au/LAMP](http://www.agosci.org.au/LAMP)**

### **What is LAMP?**

Language Acquisition through Motor Planning (LAMP) is a therapeutic approach based on neurological and motor learning principles. The goal is to provide individuals a method of independently and spontaneously expressing themselves in any setting. The LAMP approach can be used with both Unity® & Words for Life.

### **Who can attend?**

This event is targeted at professionals working with people who use AAC. However, it is appropriate for anyone who is keenly interested in learning more about LAMP, or who is already using the LAMP approach. Attendees may be parents, carers, therapists, educators, education support, or university students who have some knowledge of AAC.

### **What is covered?**

AAC theory, LAMP theory and evidence base, the five components of LAMP, how to assess for and implement this therapy approach. Practical tools will also be given to assist implementation. Please note Day 1 covers the same information as in the online workshop.

Catering provided for morning tea and lunch. Please provide dietary requirements in your online registration form.
